

BRADY MANSKE

Software Engineer | Object-Oriented Programming | Full-Stack Development
(360) 510-7408 | bmanske505@gmail.com | linkedin.com/in/brady-manske | bmanske505.github.io

EDUCATION

University of Washington | Seattle, WA

SEPTEMBER 2023 - JUNE 2026

Bachelor of Science, Computer Science | GPA: 3.88, 2x Annual Dean's List

Relevant Coursework: Computer Graphics, Distributed Systems, Machine Learning, Data Structures & Algorithms

TECHNICAL QUALIFICATIONS

Languages: C#, C++, Python, Java, TypeScript, HTML, CSS

Frameworks & Tools: React, .NET, Tailwind, PyTorch, Pandas, Git

Focus Areas: Gameplay Programming, Web Development

Environments & IDEs: Unity, VS Code, WordPress

PROFESSIONAL EXPERIENCE

Paul G. Allen School of Computer Science & Engineering | Seattle, WA

DECEMBER 2025 - JUNE 2026

Teaching Assistant, Computer Graphics

- Supported 100 students in hierarchical modeling, ray-tracing, and physics simulation through weekly office hours
- Led 5 student teams in Unity game development, emphasizing object-oriented design and event-driven architecture
- Managed course materials across Canvas and public course website, ensuring accuracy and consistency

University of Washington Recreation | Seattle, WA (Remote)

DECEMBER 2024 - JUNE 2026

Web Management Lead

- Maintained 100+ WordPress webpages, optimizing accessibility, SEO, and mobile responsiveness
- Coordinated web strategy with 10 departmental managers, utilizing Asana for project tracking and prioritization
- Implemented data-driven updates informed by Google Search Console to improve visibility and engagement metrics
- Preserved 98% site health through DubBot accessibility audits and systematic issue resolution
- Interviewed employees for several positions on the Creative Team, identifying potential candidates and guiding through tasks

PROJECT EXPERIENCE

Distributed Key-Value Store (Java) | CSE 452: Distributed Systems

MARCH 2026 - JUNE 2026

Co-Developer

- Designed and implemented a fault-tolerant distributed key-value store in Java across four progressive system architectures
- Developed primary-backup replication with client RPC and automatic failover coordination through a centralized view service
- Implemented a replicated state machine using Paxos consensus to maintain consistency across unreliable distributed nodes
- Built a dynamically sharded key-value store using multiple Paxos groups to support scalable data partitioning and reconfiguration

Escape the Forest (Unity, C#) | CSE 481D: Capstone Software

JANUARY 2026 - MARCH 2026

Co-Developer

- Built rapid prototypes using AI-assisted tools (Google AI Studio, Claude) to accelerate iteration and reduce development time
- Integrated analytics through Firestore Database pipelines to log player events and support data-driven decisions
- Implemented A/B testing infrastructure to evaluate gameplay changes and measure impact on engagement metrics
- Managed project workflow and task tracking in Trello, coordinating development in a small development team

Kindling (Unity, C#) | Imaginary Game Jam

JUNE 2025 - JULY 2025

Solo Developer

- Developed modular backend systems for a 2D strategy game, using inheritance and composition to organize reusable logic
- Utilized event-driven architecture and coroutines to manage game progression, enemy waves, and combat
- Designed flexible, data-driven systems with ScriptableObjects to support rapid content updates without code changes
- Iterated on playtester feedback to rebalance difficulty and improve player controls, improving engagement and accessibility
