BRADY MANSKE

Software Engineer | Distributed Systems | Gameplay Programming
(360) 510-7408 | bmanske505@gmail.com | linkedin.com/in/brady-manske | bmanske505.github.io

EDUCATION

University of Washington – Seattle, WA **SEPTEMBER 2023 - JUNE 2026**
Bachelor of Science, Computer Science | GPA: 3.9/4.0, 3x Annual Dean's List
Relevant Coursework: Distributed Systems, Machine Learning, Computer Graphics, Data Structures & Algorithms

TECHNICAL SKILLS

Languages: C#, C++, Python, Java, TypeScript
Web & Frameworks: React, .NET, Tailwind, HTML/CSS, WordPress
Tools & Libraries: Unity, PyTorch, Pandas, Git

PROFESSIONAL EXPERIENCE

Paul G. Allen School of Computer Science & Engineering – Seattle, WA **DECEMBER 2025 - JUNE 2026**
Teaching Assistant, Computer Graphics

- Supported 100 students through weekly office hours in hierarchical modeling, ray-tracing, and physics simulation
- Led 5 student teams building Unity games, mentoring object-oriented design and event-driven architecture
- Maintained Canvas course materials for 100+ students per quarter, ensuring accuracy and consistency

University of Washington Recreation – Seattle, WA (Remote) **DECEMBER 2024 - JUNE 2026**
Web Management Lead

- Maintained 100+ WordPress pages, improving accessibility, SEO, and mobile responsiveness sitewide
- Preserved 98% site health via recurring DubBot accessibility audits, resolving flagged issues across the full site
- Coordinated web strategy with 10 departmental managers, using Asana to prioritize and track a shared project backlog
- Applied Google Search Console data to drive content updates, increasing web impressions by 250% over 9 months
- Interviewed and evaluated Creative Team candidates across 5 open roles, guiding finalists through onboarding tasks

PROJECT EXPERIENCE

Distributed Key-Value Store (Java, Paxos, RPC) – CSE 452: Distributed Systems **MARCH 2026 - JUNE 2026**
Distributed Systems Engineer

- Implemented a fault-tolerant distributed key-value store across four progressive architectures, from single-node to fully sharded
- Built primary-backup replication with client RPC and automatic failover, recovering from node failures in <5 seconds during testing
- Designed a replicated state machine using Paxos consensus across 3 replica groups, preserving consistency under 20% packet loss
- Engineered dynamic sharding between Paxos groups, supporting live reconfiguration tested with 25 shard-migration scenarios

Escape the Forest (Unity, C#) – CSE 481D: Capstone Software **JANUARY 2026 - MARCH 2026**
Game Developer

- Built and iterated on rapid prototypes using AI-assisted tools (Google AI Studio, Claude), cutting iteration cycles by 75%
- Integrated Firestore analytics pipelines to log player events across 25 event categories, informing design decisions
- Designed and ran A/B testing on gameplay changes, improving player retention by 50% across 60 testers
- Managed project workflow via Trello, eliminating merge conflicts and enabling parallel feature work throughout the build cycle

Kindling (Unity, C#) – Imaginary Game Jam **JUNE 2025 - JULY 2025**
Game Developer

- Utilized event-driven architecture and coroutines to manage game progression, enemy waves, and combat sequencing
- Designed data-driven systems with ScriptableObjects, enabling content updates across 6 mob types without code changes
- Rebalanced difficulty and control settings from 8 playtester sessions, improving session length by 60%

LEADERSHIP & ACTIVITIES

UW Game Development Club – Lead Developer | Poplar Hall Council – AD, Marketing & Communications | DubHacks 2026 – Builder
